July 28, 2017.**

Class space is limited and reserved on a first come, first served basis.

Please note!! No refund will be provided if registration is canceled after this deadline, however you may transfer your registration to another employee within your organization.

The General Contractors Association of Hawaii is proud to present:

AGC'S SUPERVISORY TRAINING PROGRAM

The Associated General Contractors of America's Supervisory Training Program (STP) is a construction-specific training curriculum developed, updated and field-tested by and for contractors. Supervisory skill—or the lack of it—directly affects every company's bottom line. You make your money in the field, and STP can help you improve your organization's bottom line.

The comprehensive 6-course program focuses on the knowledge and skills that every supervisor must have to be an effective manager of people, time, equipment and materials. Please visit www.agc.org/STP for the complete program.

Unit 6 | Risk Management and Problem Solving (2015 Edition)

This course will cover the roles and responsibilities of a construction supervisor in accident prevention and loss control.

- Safety leadership, communication and expectations
- Planning for site safety
- Site safety management
- Site security and protection
- Multi-employer jobsite safety
- Construction risk management
- Safety and human resources
- Regulatory procedures, record keeping and documents

Who is STP for?

STP has been the professional development resource of choice for more than 150,000 construction supervisors and managers in the United States. Individuals attending STP courses include anyone on a construction jobsite in a supervisory role from the new supervisor and foreman to the experienced superintendent.

Program Completion Certificate

Upon successful completion of each individual STP course, participants will receive a course certificate. Course participants who complete STP Units 1-6, can submit an STP Completion Certificate Application to AGC of America in order to receive the AGC STP Certificate of Completion. Courses do not have to be taken in numerical order. All who complete the full program will be honored at the GCA Membership Meeting where their commitment and accomplishment will be recognized by the industry.

Please see attached for the registration form.

General Contractors Association of Hawaii presents:

AGC's Supervisory Training Program

Unit 6: Risk Management and Problem Solving

Supervisory skill—or the lack of it—directly affects every company's bottom line. Each day decisions made by every foreman and superintendent are crucial to the success or failure of every construction project. You make your money in the field. Or you lose it.

The Supervisory Training Program (STP) developed by AGC, is designed specifically to meet the needs of the construction industry. Developed, updated, and field-tested by and for contractors, the Program consists of 6 courses that focus on the knowledge and skills that every supervisor must have to be an effective manager of people, time, equipment and materials.

This course includes numerous scenario-based case studies. Participants will use the information in each unit to determine a viable solution for each case study, and present process, data, and “best case” resolution.

This course includes the following sessions:

What is Risk: introduces identifying sources of problems; identifying barriers to problems; preventing problems instead of solving problems.

Human Performance Risk: describes the attributes required for quality safety leadership, communication methods, rules and expectations, and understanding the human factor to safety.

Reactive Problem Solving: identifies the steps in a problem solving model and describes the steps included in the problem solving model.

Proactive Problem Solving: focuses on recognizing the sources of risk related problems. Anticipating the problems that create the greatest risk and identifying the techniques for eliminating, minimizing or managing associated risks.

Labor Costs and Subcontractor Risk: describes the relationship between proactive problem solving and cost control. Developing a Cause and Effect Diagram to help identify causes of problems; applying the problem solving and decision making process to subcontractor work.

Safety, Risk, Emergencies, and Crisis Management: describes loss control, preventing workplace violence, jobsite security, public relations, terrorism, and understanding how to react to a crisis or emergency.

Risk Management: identifies required insurance protection, worker's compensation, direct and indirect costs, fleet safety programs, and environmental issues.

Risk Specific Solutions: details the responsibilities of a site supervisor, site specific safety planning, and common hazard awareness.
